

NEXUS — MASTER 100% CONSOLIDADO

Architecture Ready / Launch Not Ready

13 de septiembre de 2026

VEREDICTO

NEXUS está arquitectónicamente muy avanzado, pero NO está listo para lanzamiento técnico completo.

20 CAPACIDADES

01 BRAIN · 02 DATA ENGINE · 03 VECTOR INTELLIGENCE · 04 ENGINES · 05 AGENTS · 06 EXECUTION ENGINE · 07 ACTION CONTRACT · 08 CHANGE INTELLIGENCE · 09 DELIVERY CONTROL · 10 QUALITY / TESTING · 11 GUARDIAN · 12 SECURITY / RISK · 13 INFRASTRUCTURE INTELLIGENCE · 14 OBSERVABILITY · 15 BACKUP / RECOVERY · 16 INCIDENT · 17 LEARNING · 18 MONETIZATION · 19 OUTCOME / ROI · 20 LIFECYCLE / MAINTENANCE / PORTABILITY

CONTROL LOOP

BRAIN → ORCHESTRATOR → GOVERNANCE → EXECUTE → TELEMETRY → RESULT → GUARDIAN → VERIFY → LEARN → BRAIN

REFERENCIAS

Dataiku — Data/AI lifecycle, AI-ready data, governance, agents, deployment, lifecycle.

Availeth — Process understanding, owned applications, data ownership, connect/replace/automate/AI-empower/keep-human, end-to-end validation.

Nudge Security — SaaS/AI inventory, shadow IT/AI, OAuth risk, identity governance, attack surface, spend, AI acceptable-use policy.

Plural — Live infrastructure context, dependency/impact/risk, remediation PRs, GitOps, human approval.

CAST — Dependency/context maps and Context Before Action.

Gearset — Compare/change/test/deploy/verify.

Packetlabs — TEST → FIND → REPORT → REMEDIATION → RETEST → VERIFY → LOG → LEARN.

IONIX — External attack surface discovery/assessment/validation/revalidation.

IOmergent — CSPM finding intelligence, fractional CISO/security governance, decision/simulation intelligence.

Duvo.ai — Capture → Diagnose → Decide → Act → Verify → Learn.

Cloudflare — Durable execution, workflows, sandboxing, gateway/routing, MCP/provider capabilities.

Atlassian/Rovo — AI-native SDLC, graph/context, agent workflows, plan/orchestrate/review.

CrowdStrike — Threat intelligence and prevent/detect/respond.

OneTrust — Risk/privacy/cyber/third-party/compliance/AI governance.

GTB Technologies — Discovery/fingerprinting/classification/DLP/insider risk.

ReliaQuest/GreyMatter — Data/signal optimization by value, risk, cost and outcome.

Datarails — Governed finance data, audit/versioning, forecasting/scenarios, ROI/anomaly intelligence.

Prime AI/Money Now — Pipeline recovery and opportunity intelligence.

Ignitium — Intelligence + activation across data, agents, execution, monetization and ROI.

ZoomInfo/GTM AI — Provider for data/signals into opportunity intelligence.

ServiceNow — Benchmark/reference only; no separate AI Control Tower module.

DOCUMENTOS REVISADOS

0_Handle stale discussions (PDF)

Guardian — Handle Stale Discussions — Workflow — DOCX.docx

Guardian — Handle Stale Discussions — Workflow — TXT.txt

ZIP — Diagnóstico de Integridad de Untitled.zip — 2026-09-06.txt

NEXUS — Project Gantt Chart — Master Timeline.pdf

HALLAZGOS CRÍTICOS

Stale Discussions: error por etiqueta 'attention' inexistente.

Untitled.zip: 22 bytes, 0 entradas; no es backup válido.

Gantt: plantilla, no evidencia de ejecución.

LAUNCH GATES

Source of Truth: master consolidado + inventario.

Build: componentes reales implementados.

Integration: conexiones reales funcionando.

Security: identidad, permisos, secretos, políticas y riesgo verificados.

Testing: pruebas unitarias, integración, fallo, retry-limit, rollback/recovery y end-to-end.

Observability: trace REQUEST → RESULT → VERIFY → OUTCOME.

Guardian: detección, evaluación, acción, verificación y recuperación demostradas.

Backup/Recovery: backup válido y restore/recovery probado.

Deployment: despliegue reproducible y rollback probado.

Business: al menos un flujo produce resultado medible y ROI.

Evidence: cada PASS tiene evidencia verificable.

Launch: smoke test, incident/runbook, ownership, monitoring y rollback listos.

PLAN DE CIERRE

Congelar este Master como Source of Truth.

Inventariar repositorios, workflows, APIs, cuentas/conexiones, secretos, proveedores y entornos.

Convertir la matriz 20×madurez en tablero PASS/FAIL/EVIDENCE.

Implementar el camino crítico BRAIN → GOVERNANCE → ACTION CONTRACT → EXECUTION → VERIFY → GUARDIAN → OBSERVABILITY.

Activar Backup/Recovery y demostrar restore/rollback.

Corregir workflows con fallos; stale-discussions requiere revisión de su etiqueta/configuración.

Ejecutar tests por capacidad y registrar evidencia.

Ejecutar un flujo end-to-end real en entorno controlado.

Repetirlo con fallo y recuperación.

Medir outcome/ROI.

Documentar runbooks, ownership, límites y lanzamiento.

Ejecutar Launch Gate final y solo entonces declarar READY.

CERTIFICACIÓN

ARCHITECTURE READY / LAUNCH NOT READY.
